

## CASE STUDY: SHOW BABY

### Adana Theatre Festival in Turkey

Three Show Baby's were used to control a massive water show spectacular and LEDs on the water at the Opening Ceremonies of the 15th International Theatre Festival 2013 in Adana, Turkey

#### Jens Hillenkotter states:

"We had to integrate a multimedia show around an artistic performance. Part of the opening ceremonies included a 75 meter water display in the middle of the Seyhan River in front of the Hilton SA Hotel Adana. We had two nights to program and rehearse the entire opening ceremony around the artistic rehearsals. Strong winds caused delays as the water display could shoot up to 75 meters high which means there are 3.5 tons of water which are coming down somewhere. During setup and tech rehearsals we built the mission control in a suite at the Hilton.

We used three Show Babys (equipped with 5dbi aerials) to control the water display, one as the receiver on the water platform at the river, one as sender at the mission control at the Hilton, one at the front of the house."
