

CITY THEATRICAL

NEW YORK • LONDON

September 9, 2016

For Immediate Release:

City Theatrical at PLASA 2016

City Theatrical will be demonstrating their new technology at PLASA on stand H50 in the Olympia London, September 18 - 20, 2016, including new B-Series Dimmers for LED tape, RGBI QolorFLEX™ LED Tape, new products from Pathway Connectivity, and the newly released Lightwright® 6. Andrew Voller will be also be on the stand demonstrating Moving Light Assistant™ Software.

City Theatrical is launching a new group of uniquely featured, high quality, constant voltage **B-Series Dimmers** in a variety of capacities and configurations. All partner perfectly with City Theatrical QolorFlex™ professional quality LED tapes.

The B5 Dimmer is a five-channel x 8A constant voltage dimmer in a rugged steel case. The five outputs give users the ability to run a full 40A of load such as RGB (three channels) plus bi-colour tape (two channels), or RGBA (four channels) plus WW (one channel). Three types of DMX connections are included (5 pin XLR, RJ45, and terminals), as well as a four button user interface to make address and parameter selections

The B4 x 5A RDM Dimmer is a sleek and tiny constant voltage dimmer that can control 20A of LED tape load. Its connections are all on terminals.

B4 x 5A RDM DINrail Dimmer is a DIN rail version of the B4 x 5A RDM Dimmer with all the same features, for users who prefer a DIN rail approach to installation. All connections are terminals.

The B4 x 5A RDM DINrail RJ45 Dimmer is a DIN rail version of the B4 x 5A RDM Dimmer with all the same features except the DMX connections are by RJ45 connectors for fast setups. Power in and output connections are on terminals.

RGBI a new addition to **QolorFLEX™ LED tapes** that incorporates, red, green, blue, and **indigo** LED emitters. Similar in construction to our RGBA, RGBCW, or RGBWW tapes, our **RGBI** tape alternates a 5050 RGB chip with an extra bright, deep and rich 450nm 5050 **indigo** chip.

VIA 12 LC 12 + 2 Managed Gigabit Ethernet is a gigabit Ethernet switch designed specifically for lighting, sound and video signal routing in live entertainment applications. With built-in OpticalCON DUO fiber connectors for LC multimode fiber.

The VIA5 and VIA5+1 gigabit Ethernet switch is a DIN-mountable, managed switch suitable for use in entertainment lighting, audio and video distributions systems. Ideal for use in NEMA enclosures and as a Power-over-Ethernet source for connected equipment, such as Pathport® DIN-mountable gateways, Cognito2 lighting consoles and Choreo architectural controllers.

Lightwright 6™ is the newest version of John McKernon's industry leading, multi award winning software for managing entertainment lighting paperwork, with loads of useful new features for designers and electricians.
