

Steel Safer Sidearm  
(P/N 210)

# Safer Sidearms™

Let's face it, standard theatrical sidearms are poorly designed. They're weak, can't support any downward pressure, and the C-clamp that they use is easily bent and damaged. Our Safer Sidearms eliminate all these problems by adding a strong diagonal brace that transfers force to the vertical boom pipe. These are beautifully engineered devices that will give you years of service.

PART NUMBER	NAME
