### Showman Fabricators Uses SHoW DMX Dimmers at CNBC Studio

Showman Fabricators needed to build a lot of lightboxes for CNBC Studio using RGBA LED tape – here's how they did it using SHoW DMX Three Channel Dimmers.

We spoke with Grigor Grigorov at Showman Fabricators <http://www.showfab.com/> about their recent CNBC Studio project :

**CTI:** Who was involved in the project?:

**GG:** The set designer was John Casey, the lighting designer was Bruce Ferri, and Showman's project manager was Justin Kurtz.

**CTI:** Were there specific design, budget, time, or physical constraints that you had to work within?

**GG:** For us, the challenge was the quantity of equipment. This was a relatively large-scale use of City Theatrical SHoW DMX dimmers for us – about 70 dimmers were installed into the studio.

**CTI:** Which City Theatrical products or services did you use, and why did you decide on them?

**GG:** We used the SHoW DMX dimmer for all LED control in both single and triple dimmer personalities. We used SHoW DMX low-voltage dimmers since we have had excellent results using them in the past.

**CTI:** Did you do any preliminary testing?

**GG:** We fully assembled the scenery and set electrics in the shop prior to installation in the studio.

**CTI:** What was your overall experience in working with City Theatrical on your production?

**GG:** As always, it was a pleasure to work with City Theatrical on this project! They were very responsive to the few issues that came up.

**CTI:** Would you have done anything differently in hindsight?

**GG:** In hindsight, we would have taken a modular approach to our use of the SHoW DMX units, rather than tailoring them to their lightbox area. Since the completion of this project, we've done just that.
