

## WIRELESS TECHNOLOGY

### CONTACTLESS COMMUNICATION FROM YOUR MOBILE DEVICE.

Near field communication (NFC) enables you to push and pull information including fixture setup data using ETC's Set Light app from your mobile phone or tablet, even when the fixture isn't powered.

### CONSOLE CONTROL FROM FAR AWAY

In an industry that's quickly changing, you can't always be where you need to be at a moment's notice. That's why City Theatrical's Multiverse wireless DMX control is so important.

Used in conjunction with your console, you can broadcast as many as 10 universes of DMX from a single transmitter without excessive radio energy. This frees up precious wireless bandwidth in your space.

### WHY MULTIVERSE?

Multiverse's patent-pending wireless DMX/RDM technology enables scalability of wireless lighting data like never before. It allows larger and larger systems to be expanded without producing harmful amounts of radio energy that could disrupt other wireless systems in the venue. Multiverse can change your entire approach to lighting by allowing larger and larger wireless DMX/RDM systems to be scaled up.
