

Multiverse[®] Connect Module, 2.4GHz

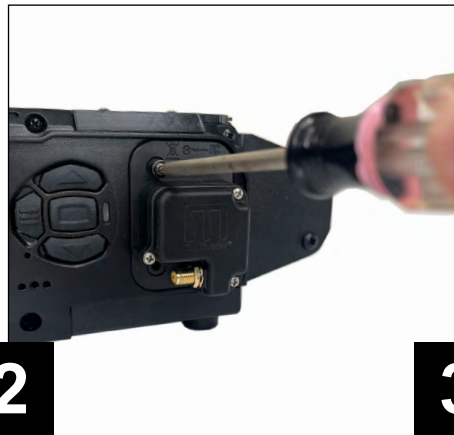

Seamless Wireless DXM/RDM Integration for Martin MAC Viper XIP Fixtures

How it works:

1. Plug the Multiverse Connect Module into the fixture base.

2. Screw the Multiverse Connect Module onto the fixture using a Phillips Head screwdriver and the screws that come with the fixture.

3. Attach the 2.4GHz antenna to the Multiverse Connect Module, and you're ready to use wireless DMX/RDM with the fixture!

City Theatrical's Multiverse[®] Connect Modules are small devices that bring all the capabilities of Multiverse wireless DMX/RDM to a lighting fixture built by an OEM manufacturing partner of City Theatrical, such as the MAC Viper XIP by Martin Lighting.

The 2.4GHz model (P/N 5914) uses the 2dBi Omni Antenna, 2.3" (P/N 5729), which is the same antenna we use in our best-selling Multiverse SHoW Baby devices.
