

# Multiverse<sup>®</sup> Connect Module, 900MHz

## Seamless Wireless DXM/RDM Integration for Martin MAC Viper XIP Fixtures

### How it works:

1. Plug the Multiverse Connect Module into the fixture base.

2. Screw the Multiverse Connect Module onto the fixture using a Phillips Head screwdriver and the screws that come with the fixture.

3. Attach the 900MHz antenna to the Multiverse Connect Module, and you're ready to use wireless DMX/RDM with the fixture!

City Theatrical's Multiverse<sup>®</sup> Connect Modules are small devices that bring all the capabilities of Multiverse wireless DMX/RDM to a lighting fixture built by an OEM manufacturing partner of City Theatrical, such as the MAC Viper XIP by Martin Lighting.

The 900MHz model (P/N 5915) uses the 1.8dBi/3.8dBi Omni Broadband "Stubby" Antenna (P/N 5984), like our Multiverse Studio Receiver wireless DMX/RDM solutions for film lighting projects and beyond. The 900MHz band is licensed for use in North America only.
